

## Case Study

---

After enduring a 200% increase in their workers compensation premium over the last 3 years, the CFO of a specialist manufacturing business contacted **ABILITY GROUP** for help. After discussions, we agreed to conduct a *Workers Compensation Pulse Check* to assess their workers compensation program to identify opportunities to reduce costs and improve the support available to their employees.

**ABILITY GROUP** was able to use their specialist knowledge and connected experience to *Pulse Check* the business' worker compensation program and in a short period of time provide an extensive report specifically identifying;

- a variety of opportunities that reduced their workers compensation costs
- areas of risk or concern
- prioritisation of corrective actions
- estimated effort and costs required to resolve the issues discovered via the Pulse Check
